

RacetriTM

Racecadotril

Presentation

RacetriTM Capsule: Each capsule contains Racecadotril BP 100 mg.

RacetriTM 10: Each sachet contains Racecadotril BP 10 mg granules for oral suspension.

RacetriTM 30: Each sachet contains Racecadotril BP 30 mg granules for oral suspension.

Description

Racecadotril is a pure intestinal antisecretory active substance. It decreases the intestinal hypersecretion of water and electrolytes induced by cholera toxin or inflammation and does not have effects on basal secretory activity.

Following oral administration, Racecadotril is rapidly absorbed and then hydrolysed to thiorphan, which is an inhibitor of enkephalinase, a cell membrane peptidase located in various tissues, notably the epithelium of the small intestine. This enzyme contributes both to the hydrolysis of exogenous peptides and to the breakdown of endogenous peptides such as enkephalins. Racecadotril protects enkephalins from enzymatic degradation thereby prolonging their action at enkephalinergic synapses in the small intestine and reducing hypersecretion. Racecadotril exerts rapid antidiarrheal action, without modifying the duration of intestinal transit.

Indication

Racecadotril is indicated for the symptomatic treatment of acute diarrhea.

Dosage and Administration

Adults: One capsule initially, regardless of the time of day. Then one capsule three times daily preferably before the main meals.

Children (from 3 months of age): Racecadotril granules should be administered together with oral rehydration. The recommended dose is determined according to body weight: 1.5 mg/kg per administration, three times daily.

Infants less than 9 kg: one 10 mg sachet 3 times daily.

Infants from 9 kg to 13 kg: two 10 mg sachets 3 times daily.

Children from 13 kg to 27 kg: one 30 mg sachet 3 times daily.

Children of more than 27 kg: two 30 mg sachets 3 times daily.

Contraindications

Hypersensitivity to Racecadotril, or to any of the excipients.

Precautions

The administration of Racecadotril does not modify the usual rehydration regimens. The presence of bloody stools and fever may indicate the presence of invasive bacteria as a reason for diarrhea or the presence of other severe disease. Racecadotril has not been tested in antibiotic-associated diarrhea and should therefore not be administered under these conditions. Caution should be taken in patients with renal or liver impairment.

Interactions

No drug interactions found. Joint treatment with Racecadotril and Loperamide or Nifuroxazide does not modify the kinetics of Racecadotril.

Side-effects

Headache, erythema multiforme, urticaria, angioedema may be seen.

Use in Pregnancy and Lactation

Due to a lack of clinical data, Racecadotril should not be administered to pregnant or breastfeeding women.

Overdose

No cases of overdose have been reported. In adults, single doses above 2 g which is equivalent to 20 times the therapeutic dose, have been administered, and no harmful effects have been described.

Commercial Packaging

RacetriTM Capsule: Each box contains 3 Alu-PVDC blister strips of 10 capsules.

RacetriTM 10: Each box contains 30 sachets of granules for oral suspension.

RacetriTM 30: Each box contains 30 sachets of granules for oral suspension.
