

Solascren[®] Lotion

Padimate O 8%, Avobenzone 2%, Oxybenzone 3%
& Titanium dioxide 2%

Presentation

Solascren[®] Lotion: Each bottle contains 60 ml lotion of Padimate O USP 8%, Avobenzone USP 2%, Oxybenzone USP 3% and Titanium dioxide BP 2%.

Description

Solascren lotion is water resistant, protective sun block, which helps prevent sunburn in all types of skin. It provides a high degree of protection against the harmful effects of ultraviolet components of sunlight which are responsible for skin cancer, wrinkling, premature ageing and darkening of the skin due to overexposure.

Solascren provides a sun protection factor (SPF) of 6 against UVA rays and 28 against UVB rays. Solascren gives you 28 times your natural sunburn protection and maintains its degree of protection up to 60 minutes in water.

Indications and Uses

Solascren lotion is indicated in-

- Normal skin types when exposed to intense sunlight
- Photodermatoses including those caused by radiotherapy
- Photosensitisation
- Solar urticaria
- Acute solar dermatitis
- Drug-induced photosensitivity
- Acute lupus erythematosus
- Herpes simplex
- Polymorphic light eruption
- Cutaneous albinism
- Vitiligo

Dosage and Administration

Solascren lotion should be applied carefully and evenly on skin before sun exposure. Apply 45 minutes before swimming or sweat producing exercise. A single application may give day-long protection but the product should be re-applied during prolonged periods of sunning and after swimming or excessive sweating.

Side-effects

Signs of irritations (including erythema, burning or rash) may appear when applied to sensitive or broken skin.

Precaution

Application to broken skin should be avoided. Contact with the eyes and other mucous membranes should be avoided.

Use in Pregnancy & Lactation

Solascren lotion should only be used if the anticipated benefits outweigh the risks.

Contraindications

Known hypersensitivity to any of its components.

Commercial pack

Solascren[®] Lotion: Each plastic bottle contains 60 ml lotion.
