

Dewax™

Carbamide Peroxide

Presentation

Dewax™ Ear Drops: Each ml ear drops solution contains Carbamide Peroxide USP 65 mg.

Description

Dewax™ is an ear wax removal drops consists of Carbamide peroxide. Ear wax is an important part of the body's system for keeping dirt, bacteria and other things causing hearing problems. Too much ear wax can block the ear canal and reduce hearing. This medication releases oxygen and starts to foam when it comes in contact with the skin. The foaming helps break up and remove the earwax. Dewax ear drops helps to soften, loosen and remove the excessive ear wax.

Indications and Uses

As an aid to soften, loosen and remove excessive ear wax.

Dosage and Administration

For use in the ear only.

Adults and children over 12 years old: Tilt the head sideways and then place 5-10 drops in the ear. Tip should not touch the ear canal.

Keep drops in the ear for several minutes by keeping head tilted or placing cotton in the ear.

Use twice daily for up to four days if needed, or as directed by a doctor.

Side effects

Common side effects may include a foaming or crackling sound in the ear after using the ear drops, temporary decrease in hearing after using the drops, mild feeling of fullness in the ear or mild itching inside the ear. Rare case of dizziness, new or worsening ear problem may be seen.

Precautions

Avoid contact with eye and mouth. If comes contact with eye, flush eye with lots of water. Seek emergency medical attention if anyone has accidentally swallowed the medication. Not instructed to use if patient has an allergic reaction to carbamide peroxide.

Contraindications

Carbamide Peroxide ear drops is contraindicated in patients with hypersensitivity to it. Do not use if you have ear drainage, ear pain, irritation or rash in the ear, or feel dizzy. Also do not use if you have an injury or perforation (hole) of the ear drum or after ear surgery. Stop use of the product and seek doctors consultation if excessive ear wax remains after use of the product for four consecutive days.

Use in Pregnancy and Lactation

There are no controlled data in human pregnancy. Use should be avoided.

Pediatric use: Children under 12 years of age: consult with a doctor.

Over dosage

An overdose of carbamide peroxide ear drops is not expected to be dangerous. Seek emergency medical attention if anyone has accidentally swallowed the medication.

Storage

Do not store above 30 °C. Keep away from light and out of the reach of children.
